Electric vehicle giant Tesla [TSLA -1.02% ▼](#) has been hard at work rolling out its Robotaxi operations, and has made some significant advances already. But plans to expand into New Jersey may prove fruitless as the New Jersey government is working on a bill that may see Robotaxis banned. Not because Jersey does not want self-driving cars, but because of how Tesla achieves self-driving operations. Investors seemed concerned about potentially losing the New Jersey market, and gave Tesla shares over a 2% drop in Wednesday afternoon's trading.

The new bill set for a vote later this year would require companies planning to release driverless cars in New Jersey to use not only cameras, but two other sensing technologies, generally both radar and lidar. This would be the first move by a state government yet to require certain hardware in driverless vehicles, though a similar proposal is also starting to move in New York.

Senator Andrew Zwicker, the Democrat who serves as the bill's primary sponsor, made his motives clear: "This is not anti-Tesla. I'm pro-New Jersey safety." Given that Zwicker has a second job as a physicist at the Princeton Plasma Physics Laboratory, he has something of an understanding of how science works. His ride in a Waymo [GOOGL +3.04% ▲](#) vehicle left him convinced autonomous vehicles could be a game-changer in transportation. But Zwicker wants multiple sensors working in the autonomous vehicles, a point that [Tesla is not embracing](#).

Tesla Home Goes Live

Tesla's ambitions at [powering homes](#) is also continuing on, and recently, Tesla rolled out Tesla Home to help cut power bills with help from [artificial intelligence](#). Tesla Home is a "home energy management platform" that

Investment Ideas

makes critical decisions about storing and using energy to help keep bills low.

We know that power bills can modify charges based on time of day, which is why some recommend doing things like laundry at off-peak hours. But Tesla put its Opticaster AI engine—which has been around for years—to work helping to determine the best times to switch over to stored battery power to carry out functions and bypass some of the most expensive power grid access times.

Is Tesla a Buy, Hold or Sell?

Turning to Wall Street, analysts have a Hold consensus rating on TSLA stock based on 10 Buys, 15 Holds, and three Sells assigned in the past three months, as indicated by the graphic below. After a 36.17% [rally in its share price](#) over the past year, the [average TSLA price target](#) of \$399.71 per share implies 1.49% upside potential.
